SUMMARY

Artificial Intelligence and Data Science undergraduate with a strong foundation in AI, data science, and software development. Possesses solid problem-solving and analytical skills with experience across the end-to-end development lifecycle, including model development, backend integration, and deployment. Skilled in applying emerging technologies to build efficient and scalable solutions. Known for adaptability, quick learning, and the ability to perform effectively in fast-paced environments. Passionate about continuous learning and contributing to innovation-driven teams.

EDUCATION

B.Tech, Artificial Intelligence & Data Science	Sep 2023 - Oct 2027
Sri Venkateswara College of Engineering	
CGPA - 8.220	
Higher Secondary	May 2023
Vivekananda Vidyalaya Matriculation Higher Secondary School	
Percentage - 88.1 %	

TECHNICAL SKILLS

LANGUAGES

AI&ML Model Developing	DSA	Database Handling	Python, C, C++, Java,
Web Development	3D Modelling	App Development	JS, HTML, CSS, REACT, DART, SQL

EXPERIENCE

Operating Assistant	May 2023 - Aug 2023
- Worked in samsung company as operating assistant for shinheung company provides parts to samsung company. - Managed stands at trade fairs and industry events to promote products, conduct presentations and answer customer queries. - Loads and unloads the products, checks quality and sends it to the assembly lines. - Learnt to check quality of the products like samsung assembly products.	
Delphi TVS - AI & ML, IIOT Internship	Dec 2025 - Jan 2026
- Architected and deployed 4 production-grade AI systems for industrial safety, energy analytics, and mobile automation, directly improving workplace safety compliance and operational efficiency - Exposed to industry level PCs & Servers, Miniature Computers, RAID Levels, Server Hosting, Multiple levels of Virtualization - Integrated AI models with industrial hardware (PLC controllers) using Modbus protocol for seamless automation of safety alerts and warning systems - Collaborated with cross-functional automation engineering teams to test and validate AI systems under real factory conditions, ensuring industrial-grade reliability and scalability	

PROJECTS

CCTV-Based PPE Detection System with Industrial PLC Integration

- Engineered a real-time AI-based safety surveillance system leveraging Vision-Language Models to detect PPE compliance (helmets, goggles, masks, vests) using existing CCTV infrastructure.
- Implemented multi-frame temporal verification to reduce false positives and optimized the system for high-accuracy, continuous monitoring.
- **Technologies:** Python, PyTorch, OpenCV, Vision-Language Models (LLaVA/Moondream), PLC Integration, Modbus

Power Insights Automatic Dashboard with Intelligent Data Processing

- Built intelligent analytics platform with automatic Excel schema detection to process heterogeneous energy datasets from multiple departments
- Created interactive dashboards for trend analysis, peak usage detection, and department-wise energy optimization
- **Technologies:** Python, Pandas, Excel Automation, Data Visualization, Web Frameworks

Flutter-Based CO₂ Safety Checklist Mobile App with AI Validation

- Developed mobile inspection system with AI-powered image recognition for automated safety checklist verification
- Implemented offline-first architecture with cloud synchronization, timestamped logs, and real-time compliance reporting
- **Technologies:** Flutter, Dart, Computer Vision, AI Image Recognition, Cloud Sync, Mobile UI/UX

Navigation System For Visually-Impaired

- Designed a wearable smart-glasses solution featuring a Context-Aware Navigation System that utilizes Vision-Language Models (VLMs) for real-time scene description and obstacle detection.
- Engineered a dual-layered guidance engine combining macro-navigation (Google Maps routing) with micro-navigation (CNN-based obstacle avoidance) to provide safe, independent mobility.
- Technologies: Python, OpenCV, Vision-Language Models, Maps API, Wearable Tech, Sensor Fusion.

Smart Student Hub

- Designed and implemented a centralized digital platform to securely store, manage, and retrieve academic and co-curricular certificates across the college ecosystem.
- Developed secure backend authentication and authorization mechanisms, ensuring role-based access for students, faculty, and administrators.
- **Technologies:** Python (Flask), MySQL, REST APIs, JWT Authentication

Smart Lingua

- Built SmartLingua, an AI-powered translation system that converts Nepali and Sinhalese literature into English, preserving cultural tone and meaning, with OCR-based text extraction from images, scanned books, and PDFs.
- Designed an offline, lightweight, and secure architecture with human-in-the-loop feedback to improve translation quality over time, enabling scalable access to South Asian literature in low-connectivity environments.

Coderzz.ai

- Built an AI-powered code generation chatbot using Ollama (local LLM inference) with reinforcement learning-based feedback optimization, enabling accurate, context-aware programming responses.
- Integrated Python, FastAPI/Flask, REST APIs, vector embeddings, and secure backend services to deliver low-latency, offline-capable conversational coding assistance.

ADDITIONAL INFORMATION

Languages: English, Tamil.
Location: Open to relocate for opportunities
Interested Domain: Full Stack, IOT, AI&ML, Computer vision, Robotics.

CERTIFICATIONS

- **Oracle** - Generative AI
- Cloud Computing Workshop
- **NPTEL** - Digital Image Processing
- **Infosys** - Software Engineering & Development
- **Nvidia** - LLM with Prompt Engineering
- **Mindcluster** -cloud computing, virtualization
