CAREER OBJECTIVE

Proficient in several programming languages and frameworks, with practical experience in application development and database management. Skilled at designing and building efficient, user-focused solutions. I emphasize scalability, performance, and collaboration. I am passionate about ongoing learning, clean code practices, and contributing to innovative and meaningful projects.

EDUCATION

B.Tech-Artificial Intelligence and Data Science (2023-2027)

Sri Venkateswara College of Engineering.

CGPA-8.64(till 6thSEM)

TECHNICAL SKILLS

- Programming Languages: JavaScript, Python, C, Java, C++, C#
- Front-End Development: HTML5, CSS3
- Database:mysql
- Game Development: Unity (C#)
- Tools & Platforms: Visual Studio Code, Unity Hub,Power Bi

CO-CURRICULAR

- Participated in Coding Competitions focused on web development and problem-solving.
- Attended technical workshops on Augmented reality and Virtual reality ,Capture the Flag for cyber techs.

EXTRA-CURRICULAR

- volunteered in college tech fests and coding events.
- Participated in public speaking, debate, presentation competitions to strengthen communication skills.

INTERNSHIP

Web Development Intern-3Skills

- I built and updated responsive web apps with HTML, CSS, and JavaScript. Picked up a ton of hands-on experience with real-world web development along the way.

PROJECTS SUMMARY

Material Requirement Processing System

- Inefficient PC component inventory and order management.
- Solution: Developed an MRP-based web application for PC customization, real-time inventory tracking, and order management.
- Tech Stack: HTML, CSS, Python, MySQL

Voice to Sign Language Converter (AR Project)

- Communication gap between speech users and sign language users.
- Solution: Developed a Unity-based AR application to convert voice input into real-time sign language gestures.
- Tech Stack: Unity, C#

Sign Language to Speech Converter

- Limited real-time communication between sign language users and speech users in online meetings.
- Solution: Developed a browser-based AI tool to translate sign language into real-time speech and subtitles using edge computing.
- Tech Stack: Python, HTML, CSS, JavaScript, Web Audio API, Chrome Extension (Manifest V3)
