

NITHYA SHIVA THIRUMALAIVARATHAN

2nd Year, CSE-C (AI & DS) · SVCE — DPL Player Profile

8015740382 | nithyasiva890@gmail.com | github.com/zeta-dev-NS

PLAYER SUMMARY

All-rounder pick: strong in structured coding and data-handling challenges (DSA, SQL, output prediction), backed by hands-on front-end/JS build experience. Debugging-oriented mindset — comfortable working fast and accurately under round-based pressure.

CORE SKILLSET — BATTING ORDER

- Data Structures & Algorithms: linked lists, stacks, BST, AVL trees, sorting — following the Striver A2Z curriculum in C++
- SQL & DBMS: normalization, transactions, ER modeling — strong fit for SQL-based challenge rounds
- JavaScript: DOM manipulation, Canvas API/animation — for coding & output-prediction style rounds
- Backend basics: Express.js routing and simple REST endpoints
- Debugging: methodical, breaks problems down to internals — built for accuracy-scored rounds

MATCH-READY STRENGTHS

- Speed: comfortable with timed problem-solving from regular DSA practice
- Accuracy: coursework and self-practice both emphasize correctness over shortcuts
- Versatility: can cover Coding, Debugging, SQL, and Output Prediction rounds — a flexible pick across match types
- Teamwork: experience delegating and coordinating in multi-person technical projects

TECHNICAL COURSEWORK

- Data Structures (CS22303) — linked lists, stacks, BST, AVL trees, sorting
- DBMS (CS22301) — SQL, transaction management, ER modeling
- Artificial Intelligence (AD22301) — search algorithms, Minimax, Alpha-Beta pruning
- Ongoing self-practice: Striver A2Z DSA sheet (C++)

WHY PICK ME

- Covers multiple challenge types (Coding, SQL, Debugging, Output Prediction) — reduces risk for a team needing a flexible all-rounder.
- Consistent, methodical practice habit rather than one-off prep — built for repeated rounds across a tournament format.
