EDUCATION

•Bachelor of Technology in Artificial Intelligence and Data Science

2023–2027

Sri Venkateswara College of Engineering, Sriperumbudur

PERSONAL PROJECTS

•Nero – AI Voice Assistant

A Python-based AI voice assistant with face recognition authentication, wake word detection, and multi-provider LLM integration.

- Implemented speech-to-text, text-to-speech, and wake word detection (Picovoice Porcupine).
- Integrated multi-LLM support (OpenAI GPT-4, Claude, Gemini, Groq) with runtime provider switching.
- Built face recognition-based login using OpenCV and WhatsApp/YouTube automation via voice.
- Technology Used: Python, OpenCV, SpeechRecognition, pyttsx3, Pyporcupine, OpenAI API, Anthropic Claude, Google Gemini, Eel, SQLite, PyTorch, HTML/CSS/JS.

•Decentralized Groundwater Monitoring Platform

Built an IoT system that collects sensor data to monitor groundwater levels and automate irrigation decisions.

- Implemented blockchain logging and smart alerts to prevent over-extraction by industries
- Notify farmers when groundwater levels become critical
- Technology Used: Next.js, css, Python, Blake2, ESP, Gyroscope, PH Sensor.

•WildLens AI – Animal Detection and Classification System

Presented at GDSC Hackathon '25, focused on wildlife conservation through AI-driven detection.

- Trained a deep learning model using TensorFlow and Keras to classify animal species from captured images.
- Implemented data preprocessing and augmentation to enhance detection accuracy and model generalization.
- Designed a system to display detailed species information, promoting awareness of endangered and endemic animals.

TECHNICAL SKILLS AND INTERESTS

Programming Languages: Python, Java, C, C++, SQL

Web Development: HTML, CSS, JavaScript, React, Next.js

Databases & Backend: Supabase, MySQL, MongoDB

AI/ML Concepts: Machine Learning, Deep Learning

Tools: Git, GitHub, VS Code, Canva

Areas of Interest: Artificial Intelligence, Agentic AI Systems, Machine Learning, Web Development, Game Development, Blender

Soft Skills: Problem Solving, Self-learning, Analytical Thinking, Technical Presentation

ACHIEVEMENTS

•3rd Place – Project Presentation, UPAGRAHA'26 (National Level Technical Symposium), SVCE 2026

- Designed and presented a VR-based Disaster Management Simulator integrated with Blockchain for tamper-proof data logging.
- Demonstrated real-time simulation workflow and articulated system architecture, AI integration, and secure data storage mechanisms.

•Runners-Up – Analytical Showdown 4.0, SVCE 2026

- Analyzed and engineered features from a complex Airbnb dataset under competitive time constraints.
- Built and deployed an XGBoost (XGBClassifier) model; conducted feature importance analysis to derive actionable business insights.

•Selected Participant – Smart India Hackathon (SIH '25), SVCE 2025

- Successfully trained and demonstrated an ML model for sand grain size classification under a competitive environment.

CERTIFICATIONS

•Generative AI – NVIDIA

•Software Engineering – Infosys Springboards

•Fundamentals of Cryptography – Infosys Springboards
