PROFILE SUMMARY

Versatile professional skilled in Data Analytics and Full Stack Development, with expertise in Power BI, SQL, Python, and Excel for data insights, and JavaScript, React, Node.js, and MongoDB for building scalable applications. Adept at combining analytical problem-solving with technical development to deliver impactful business solutions.

EXPERIENCE

Web development Internship **Prodigy Infotech | Jul 2026 – Aug 2026**

- Assisted in designing and developing responsive web applications using HTML, CSS, JavaScript, and React.
- Collaborated with senior developers to implement front-end features and optimize UI/UX for better user engagement.
- Contributed to team discussions and provided innovative ideas to improve application performance and scalability.

EDUCATION

B.Tech(Artificial Intelligence and Data Science)

Sri Venkateswara College Of Engineering, 2024-2028

- CGPA: 8.6
- Literature Team Lead - Tamil Mandram of SVCE

SKILLS

Full-Stack Development - JavaScript, React.js,HTML & CSS, Node.js and Python.
Data Visualization - Power BI dashboards, Excel & CSV analytics, insight generation.
Database Management - MySQL , mongodb , SQL server , postgresql.
Machine Learning - Model Training & Testing, Predictive Modeling, Data Cleaning & Feature Engineering, Performance Optimization .

PROJECTS & PUBLICATIONS

Digital Learning Platform for Rural Schools, Nabha

- Built an accessible e-learning platform to support rural students with interactive lessons and quizzes.
- Optimized for low-bandwidth use, improving access to education in underserved communities.

Agentic AI System for Inclusive Recruitment

- Developed an AI-powered recruitment platform designed to ensure bias-free candidate evaluation and promote inclusivity.
- Implemented fairness algorithms and explainable AI models to minimize discrimination in hiring decisions.
- Designed workflows for automated candidate screening, shortlisting, and reporting, improving efficiency while maintaining ethical standards.

Smart Waste Management: End-to-End Blockchain-Governed Multi-Agent Intelligence for Municipal Solid Waste at Urban Scale

- Published research on leveraging blockchain technology and multi-agent systems to create a transparent, efficient, and scalable framework for urban solid waste management.
 - Proposed an end-to-end governance model ensuring accountability, traceability, and optimized resource allocation across municipal operations.
 - Highlighted the potential of agentic intelligence in automating decision-making, improving sustainability, and reducing inefficiencies in waste collection and disposal.
