ABOUT

AI & Data Science student building systems at the intersection of software, automation, and digital business. Focused on real-world execution, scalable design, and measurable impact.

SKILLS

Software & Development:	Automation & Systems:	Web3 & Verification:	Business Execution:
- Python, JavaScript, C, C++ - HTML, CSS, servlet - Git, PDF.js - Modular app development - Client side systems	- AI Workflow Automation - Lead Handling Pipelines - System Level Debugging - Performance Optimization - Runtime Diagnostics	- Smart Contract Integration - Solidity Basics - Wallet verification systems - Wallet Integration systems	- SEO & Digital Marketing - Meta Ads - Market Research - Power BI - Excel

EXPERIENCE

Freelance Developer & Digital Marketer	June 2025 - Present
- Delivering websites and digital marketing solutions for small businesses. - Managing SEO and paid advertising campaigns with measurable performance tracking.	
Project Lead @EQOVE	June 2026 - Present
- Designing and implementing product architecture across the frontend, backend, and event-processing infrastructure. - Built and iterated on systems for capturing, processing, and analyzing digital user behavior. - Worked on product strategy, technical architecture, experimentation, and evaluation of potential product directions.	

CERTIFICATIONS (From Intellipaat)

- Data Science - Power BI - Artificial Intelligence - Advanced SQL
--

EDUCATION

Sri Venkateswara College of Engineering	Sep 2024 - May 2028
Bachelor of Technology in Artificial Intelligence And Data Science	

PROJECTS

COMPLETED TOP 3

1 : Agentic Sales Consultant (AI Automation System) (Project: Website & Dashboard)
- Built an AI driven sales assistant to automate lead qualification, follow ups, and early stage client interactions across multiple stages of the sales funnel. - Designed agent based workflows to simulate a sales consultant across different stages of the funnel, reducing manual workload in early stage prospect handling by over 60%. - Implemented automation pipelines for website conversation handling, response generation, and interaction logging to help sales teams focus on high intent prospect meetings.
2 : Decentralized Document Proof-of-Existence System (Project: https://proof-of-existence-nine.vercel.app/)
- Built a blockchain-based system to immutably register and verify document hashes without storing files on-chain. - Implemented smart contracts for hash registration and verification with MetaMask wallet integration. - Designed a clear end-to-end verification flow prioritizing security, privacy, and correctness.
3 : Business Website Development & Digital Marketing Automation (Project: https://subamkids.in/)
- Designed and deployed responsive websites for small businesses with SEO focused structure, improving web discovery and increasing inbound customer inquiries and calls. - Executed Meta ad campaigns and optimized performance using engagement and conversion metrics, generating nearly 3× higher client acquisition compared to website only traffic sources. - Delivered end-to-end solutions from requirement gathering to deployment and optimization.

IN PROGRESS

1 : Trade Paladin
Developing a mobile first gamified trading simulation system focused on teaching market decision making through interactive scenarios rather than passive content. Designing structured learning flows, scenario based gameplay, XP progression systems, and controlled trading simulations that help users build intuition through repeated decision feedback loops.
